What you will learn...

- ✓ Design distributed systems that manage "big data" using Hadoop and related technologies.
- ✓ Use Pig and Spark to create scripts to process data on a Hadoop cluster in more complex ways.
- ✓ Analyze non-relational data using HBase, Cassandra, and MongoDB
- ✓ Choose an appropriate data storage technology for your application
- ✓ Use HDFS and MapReduce for storing and analyzing data at scale.
- ✓ Analyze relational data using Hive and MySQL
- ✓ Query data interactively with Drill, Phoenix, and Presto
- ✓ Understand how Hadoop clusters are managed by YARN, Tez, Mesos, Zookeeper, Zeppelin, Hue, and Oozie

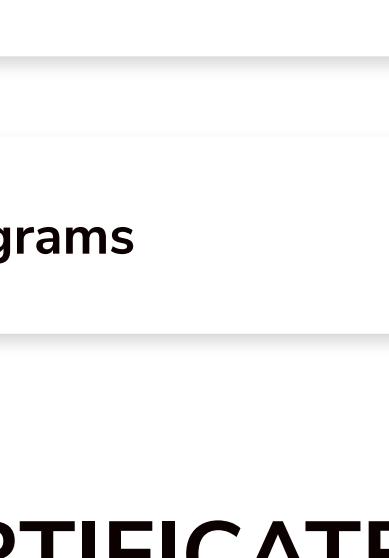

REQUIREMENTS

- You will need access to a PC running 64-bit Windows, Mac OS, or Linux with an Internet connection and at least 8GB of *free* (not total) RAM, if you want to participate in the hands-on activities and exercises.
- If your PC does not meet these requirements, you can still follow along in the course without doing hands-on activities.
- Some activities will require some prior programming experience, preferably in Python or Scala. A basic familiarity with the Linux command line will be very helpful.

DESCRIPTION

- The world of Hadoop and "Big Data" can be intimidating hundreds of different technologies with cryptic names form the Hadoop ecosystem. With this Hadoop tutorial, you'll not only understand what those systems are and how they fit together - but you'll go hands-on and learn how to use them to solve real business problems!
- Learn and master the most popular big data technologies in this comprehensive course, taught by a former engineer and senior manager from Amazon and IMDb. We'll go way beyond Hadoop itself, and dive into all sorts of distributed systems you may need to integrate with.
- Install and work with a real Hadoop installation right on your desktop with Hortonworks (now part of Cloudera) and the Ambari UI
